

Heating Mirror

The heating mirror is fastened to the wall by four spacers provided and can be operated immediately. A heating mirror sized 600 x 900 x 25 mm can optimally heat up a bathroom of up to 15 m² (or 400x500x25 for smaller bathroom) and is complementary to the conventional heating systems.

While operated it does not fog up.

The mirrors are manufactured of a special safety glass.
